China express
An in-depth analysis of the characteristics of the Chinese digital revolution

A Galilean journey
A homage to Galileo Galilei for the 450th anniversary of his birth with labs, exhibitions and philosophical discussions

IF Shuttle service
A free shuttle service from Pisa Central station taking visitors to Festival venues from 9am to 7pm. Free wifi on-board

BY CAR

From Florence: Take the A11 Firenze-Mare motorway, exit at Pisa Nord and then take the SS Aurelia southbound until Pisa (about 6km). Alternatively, take the SGC FI-PI-LI and exit at Pisa Centro.

From Rome and Bologna: Take the A1 motorway to Pisa and then the A11 motorway and exit at Pisa Nord. From Rome you can also take the A12 to Civitavecchia. Continue along the SS1 Aurelia and then join the A12 at Rosignano. Exit at Pisa Centro.

From Genoa: Take the A12 Genova-Rosignano motorway and exit at Pisa Nord or Pisa Centro.

Car sharing: www.autoincomune.it

BY TRAIN

Pisa Centrale station is a short distance from the city centre. There are direct connections with Turin, Milan, Florence, Lucca and Rome. If you are coming from Venice, Siena or Bologna you need to take the Florence line.

Stazione di Pisa Centrale, Piazza della Croce Rossa, 1
Tel. 050 917316 - Call Center 89.20.21
www.trenitalia.com

BY PLANE

Pisa International Airport "Galileo Galilei" is served by 19 airlines (some of which are budget airlines) to 78 different European and international destinations. The airport is about a twenty minute walk from the centre of Pisa and one hour from Florence. Pisa is well connected to Florence by bus and train.

Aeroporto Galileo Galilei
Tel. 050-849111 - Fax 050-849216
sat@pisa-airport.com - www.pisa-airport.com

BY BUS

The Compagnia Pisana Trasporti Nord (CTT) provides bus services within Pisa city and to and from the surrounding areas.

http://www.cttcompany.it

Terravision connects Pisa city centre with Pisa airport, Santa Maria Novella station in Florence and the Amerigo Vespucci airport in Florence.

GETTING TO PISA

CLAUDIO GIUA
Director of the Internet Festival

INTERNET FESTIVAL 2014
SHAPING THE FUTURE

I had just been elected the Director of the Internet Festival, it was 2012 and I thought that those who had envisaged the idea were mad. How could they have imagined it was possible to "capture" the Internet that is global and elusive, whose nerve centres process economic and financial exchanges, scientific know-how and political decisions, whose growth had created new empires whilst crushing established ones, and that regulates the rhythm and the relations of thousands of people so much so that it had become an essential component of their lives? As I am now very familiar with those nine "mad" promoters of the Festival, I know where their idea came from: if tireless innovation and the demand for training and information require sites and moments of synthesis, a festival can illustrate exemplary facts and trends. We hope that we are again successful this year.

FROM RAW MATTER TO GEOID

Matter, the key word of the 2014 edition of Internet Festival, shapes the Festival's "containers" in which the citizens, the opinion makers, the researchers, the public administrators, the makers, the start ups and the visionaries interact in a unique setting in which doing, listening and learning become shared and interconnected activities.
There are eight themed areas, the Festival's "containers" in which to look for what piques your interest and curiosity: Break the rules, Cooperation wanted, Culture is smarter, Design to innovate, Go green, Make it good(s), Play the game, Take the money.

BREAK THE RULES_
X-TRA_
TUTORIAL TOUR_

The Geoid is the physical representation of the concept of IF2014: from the bit to the atom; from the atom to the molecular chain; from the molecular chain to the pentagonal form; from the pentagon to the network and, finally, from the network to the Geoid. Thus was born the temporary marquee of IF2014, that hosts panels, interviews, concerts, theatrical shows and much more besides, to enliven Piazza dei Cavalieri, a piazza that symbolises history, culture and research, and not just of Pisa.

450th ANNIVERSARY OF THE BIRTH OF GALILEO GALILEI

IF2014 pays homage to the father of modern science, leading a great philosopher such as Remo Bodei to reflect on the role of Galileo as founder in today's world of machines and, at the same time, as a great witness to human endeavour in a day that bridges philosophy and technology. The T-Tours, draw the teachings of Galileo together in workshops, exhibitions and shows, from studies on falling bodies to the history of microscopy and the lure of the mysterious universe.

CHINA EXPRESS

A trip East visiting the dynamics and features of the Chinese digital revolution.

632 million Chinese people use the Internet; **74.5%** of netizens access the Internet via a mobile device; an (estimated) **12.000** hi-tech businesses are located at Zhongguancun, the Chinese "Silicon Valley"; **6 trillion** e-commerce transactions are made in China every year; **9.214** URLs are censored in China out of the 66,024 that are monitored by the Great Firewall project, including Facebook, YouTube, Blogspot, Twitter and WordPress.

Chinese businesses invest just 2% of their profits in information technology, half the world average. From Taobao, Chinese Ebay, Baidu, their search engine, to Youku, the equivalent of Youtube and Weibo, a hybrid between Twitter and Facebook, China has developed its very own system of platforms and sites, which offer similar and equivalent services to those in the West. With valuable collaboration from the Confucius Institute of Pisa (which came into being through an agreement between the Scuola Superiore Sant'Anna and the University of Chongqing), the Internet Festival has carried out research into the dynamics and characteristics of the digital world in China, which is having significant impacts on both contemporary literature and art.

CINEMA EXHIBITIONS

VENUES:

_Bastione Sangallo
_Cineclub Arsenale
_CNR
_Geoid
_Ponte di Mezzo
_SMS Centro Espositivo

The work of art in the age of mechanical reproduction, wrote Walter Benjamin, would not be the same. What would happen if, in addition to being reproducible, art was to become multipliable, expandable, de-localised and borderless? IF2014 is devoting a whole area to visual and performance art as well as music, cinema and theatre that takes the old raw materials and, with digital innovation, utilises them in new expressive forms and ways.

Italy in a Day

A day with Italians

Italy in a Day is the Italian edition, organised by Gabriele Salvatores, of a project by Ridley Scott: Italians were asked to submit videos taken by whatever means (video cameras, smartphones, photo cameras) during the 24 hours of 26 October 2013. The result was the first Italian experiment into collective filming, in which the narrative material (the images and thoughts) was supplied by anyone who wanted to do so with the arranging of the story being entrusted to someone who does it for a living. Rather than a social network this was a social movie made with passion, respect and a sense of responsibility, without sacrificing a "necessary glance" or the personal perspective on reality.

9th October
8.30pm/10pm
Cineclub Arsenale
Screening
***Italy in a Day*, produced by RaiCinema, Indiana and Scott Free is the Italian version of Life in a Day, a film taken on 24 July 2010**

Evening concerts. 1. Mari Kvien Brunvoll 2. Franco D'Andrea trio ft. dj Rocca & Andrea Ayassot

9th October
9.30pm
Geoid
Concert
In collaboration with Toscana Musiche, Ex Wide, Musical Box Rai Radio2

A double concert opens IF2014's musical programme, expressing the auditory #materia-prima (or raw matter) through the voice and sampling of Mari Kvien Brunvoll, the piano of Franco D'Andrea, the drum machines and live programming of DJ Rocca and the sax of Andrea Assayot. The first project is a mix of jazz, electro pop and blues coloured by Nordic atmospheres; the second combines three absolute icons of the Italian music scene, exploiting the unpredictable energy of jazz and the emotional impact of the best electronics.

A look at China

A series of documentaries on the world of China and the screening of “The Confucius Institute of Pisa”.

- 10th October
- 6.30pm/8pm
- Cineclub Arsenale
- Screening
- In collaboration with the Confucius Institute of Pisa

The Yes Men Fix the World

Winner of the public’s prize in the Panorama section of the Festival of Berlin, the Yes Men Fix the World is a documentary that follows the activities of contemporary art duo, The Yes Men. Marrying political activism and performance art, Andy Bichlbaum e Mike Bonanno, pretending to be employed by a major multinational and using new technology and Internet contacts as their offensive weapons, infiltrate the seats of power and the vital centres of capitalism in order to expose the system of lobbying and the corruption so prevalent in today’s world.

- 10th October
- 8.30pm/10.30pm
- Cineclub Arsenale
- Screening
- by Andy Bichlbaum, Mike Bonanno and Kurt Engfehr (France, 2009, 87’) orig. ver. sub. Ita. The film will be introduced by the Lo Schermo d’Arte Cultural Association

IF-Rewind

Travelling film show touring the city, in collaboration with City Sightseeing Pisa and MemorySharing. Departure from the SMS Exhibition Centre.

- 10th October
- 9pm
- SMS, Centro Espositivo
- Travelling film show
- In collaboration with City Sightseeing Pisa

Evening concerts.
1. Khalab & Baba Sissoko
2. MOP MOP Sound System

Two more concerts expressing the auditory #materia-prima for IF2014's second musical event. The first is a shamanic encounter between two opposites that attract. On the one hand a veritable pillar of contemporary Malian music, the multiple award winning Baba Sissoki, master of the oral heritage of secular Mandingo tradition. On the other, DJ Khalab, whose beat follows an imaginary path that leads to the Africa of the future. The second concert explores the marriage of Africa and electronics through the medium of nu-jazz, bringing to the stage the Sound System version of the funk/afro/jazz MOP MOP project (Andrea Benini - drums, Luca Spinogatti - turntable & live electronics, Pasquale Mirra - vibraphone, Danilo Mineo - percussion).

10th October
9.30pm
Geoid
Concert
In collaboration with Toscana Musiche, Ex Wide, Musical Box Rai Radio2

Is the man who is tall happy?

An Animated Conversation With Noam Chomsky

Using illustrations, imaginative animation techniques and 16mm footage, Michel Gondry enlivens a conversation with Noam Chomsky, MIT professor, free thinker and father of modern linguistics. Gondry "gets into" Chomsky's head to produce an intimate and philosophical portrait, a dialogue between words and images that questions the meaning of life and that totally human need to satisfy the eternal and puerile craving for happiness.

11th October
8.30pm/10pm
Cineclub Arsenale
Screening
by Michel Gondry.
With Michel Gondry, Noam Chomsky
(France, 2013, 90')

The Night of the Old Videogames

A challenge on vintage video games at the Museum dedicated to the history of computing

Computers have always been used for playing games:
in 1951 there was tic-tac-toe on the Ferranti, in 1962 SpaceWar on the PDP-1 was already a fully fledged interactive video game.
Whether it was a PC or a computer initially disguised within an arcade games machine then later in a home games console, video games form one of the main chapters in the history of computing: an ongoing technological race, an ever expanding market of all ages and an astronomical turnover.
They are also the latest step in that process that, starting with the oral narrative and developing through the theatre, the cinema and cartoons, from time to time adds a new dimension to the way that stories are told and enjoyed: with video games there is also a direct participation in the lives of the characters. The least you can do is to explore it by visiting the Museum and playing the games. Additional information http://hmr.di.unipi.it/NVV2014/

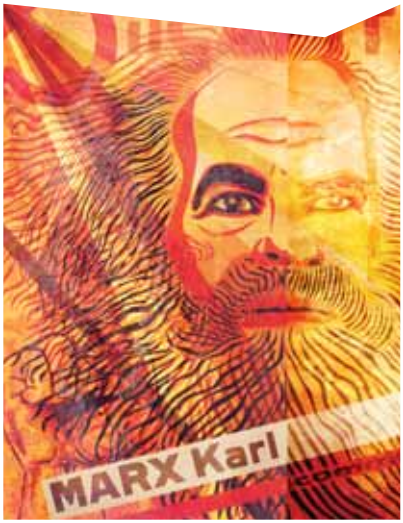
11th October
9pm/midnight
Museum of Calculating Machines
Via Bonanno Pisano, 2/A
Special Night at the Calculation Museum
Organised by HMR & Giovanni A. Cignoni, Museum of Calculating Machines, UniPi

Marx reloaded

"Everything you always wanted to know about Marx... in a tweet"

To explore the contradictions of this work, from social networks to new forms of slavery, the Sacchi di Sabbia (or Sandbags) have brought together some blogger authors (Matteo Pelliti and Claudia Vago), supported by the original inventions of the Diecimila.me collective, in an attempt via Twitter to evoke the spirit of a great historical personage, in order to interview him: Karl Marx. Moni Ovadia will be there to the give the philosopher a voice and body, in a performance that combines the web, music, live-tweeting and poetry, assisted by the Sacchi di Sabbia and Marco Azzurrini.

11th October
9.30pm/10.30pm
Geoid
Theatrical show
Marco Azzurrini, Diecimila.me, Paolo Peewee Durante, Moni Ovadia, Matteo Pelliti, Sacchi di Sabbia, Claudia Vago
With the extraordinary participation of Derrick de Kerckhove



Black Mirror

The British mini-series produced by Endemol and aired in Italy by Sky, that reflects on the obsessive use of technology in modern life. The cast, the plot and the setting are different in each episode, but the underlying theme is the same: the onward march of technology and the terrible consequences wreaked on our life.

12th October
8.30pm/11pm
Cineclub Arsenale
Screening

Season 1, episode 3:
¨The Entire History of You¨ by Brian Welsh
(Gb, 2011, 45 min)

Season 2, episode 1:
¨Be right back¨ by Owen Harris
(Gb, 2013, 45 min)

Season 2, episode 3:
The Waldo Moment¨ by Charlie Brooker
(Gb, 2013, 45 min)

Webnotte

The Web transmission of Repubblica.it arrives in Pisa for a special evening filled with music and surprises, a great preview of the new season. As usual, the music will set the tone for the evening, with the “house band” of Webnotte, directed by Mark Hanna, and a special guest, the king of Italian rock, Piero Pelù. He will be joined by two young stars that Pelù unearthed on The Voice, Giacomo Voli and Francesco Guasti, along with an excellent band from Pisa, the Gatti Mezzi, with their blend of jazz, swing and pop and some of their own songs. Videos, comedy and more will help make the Webnotte evening a unique experience, live from Pisa.

12th October
9.30pm/11.30pm
Geoid
Musical event
Organised by Ernesto Assante and Gino Castaldo (Repubblica)

dÉbruit

The last musical event of IF2014, the final degree of abstraction of the auditory #materia-prima with the surrealist afrobeat of dÉbruit. The Parisian DJ and producer has made this union of urban rhythms and African and Middle Eastern music his trademark sound. In fact, since 2008, thanks to his enthusiastic involvement with African culture, the music of dÉbruit has become a highly personal vision of unstructured contemporary funk, ‘contaminated’ by the sounds of Africa.

12th October
11.30pm
Geoid
Dj Set
In collaboration with Toscana Musiche, Ex Wide and iOFF Festival

Mothergreen

The hardware gardens

The dismantling of the motherboard of a personal computer gave rise to Mothergreen, a collection of green installations on the Ponte di Mezzo: temporary gardens, oases where visitors to the Internet Festival can relax.
Seven principal components of the motherboard, the CPU, the ROM, the Northbridge, the Southbridge, the Slots, the Expansion Bus and the battery are thus transformed into captivating green areas within which the different elements organised by the Vivai Palandri nurseries reconstitute the geometric volumes of the electronic components.
Finally dedicated QR codes accessible in the various gardens take visitors to specific screens detailing the individual elements being displayed.

9th, 10th, 11th and 12th October

Thu. 3pm/midnight
Fri. Sat. Sun. 10am/midnight

Ponte di Mezzo

Installation

Organised by Luigi Formicola.
Working plans for the preparation: Francesca Ranucci.
Produced by Vivai Palandri

VIVAI PALANDRI

URBI@ORBI

Tracks, scents, signs like those of ancestral animals as, moving among the bits, we leave behind our fingerprints made of imperceptible silicon. Objects and sensations, maps and words.
Infinite are we who fall into the well/sea of yottabytes.
Who stores the fingerprints? What predator follows our tracks and gathers them in order to reconstruct from these insignificant items a complete picture of our lives and of we ourselves. For how long? Until the end of time.
Monolithic microprocessors that drone on until the end of time, until the end of time.
Alexandria and its library, our thirst for knowledge and control, the universal library, from our genes to our feelings. It is impossible to delete the fingerprints. It is impossible not to be a cluster on the edge of the Big Data galaxy. The digital natives have learned to leave the fewest fingerprints possible. The alternative is not to exist.

9th, 10th, 11th and 12th October

6pm/midnight

Ponte di Mezzo

Video installation

Produced by Fondazione Sistema Toscana, from a creative idea by Luigi Formicola and Tobia Pescia
2D and 3D Video composition organised by Delta Process

Writers Act

Diffused performance of Street Art

A work of art whose raw materials are wood, spray cans, colours, the artist, the public and the locations. These are the elements that together become the participants in a collective choral opera that digital innovation recomposes, reprocesses, reproduces and returns to a public that has no locations or borders.

9th, 10th, 11th and 12th October

Thu. 4pm /6pm
Fri. Sat. Sun. 10am/6pm

Live performances at various locations. Return to Bastione Sangallo

Performance of Street Artists

Organised by Alessandro Battisti
Artisti: Etnik, Corn79, Mrfijodor, Macs, Francesco Barbieri.
Video Organised by Valerio Torresi

Pisa Art Design

A cultural association with the goal of promoting art and design, starting with the talent of the local area and extending beyond its own borders. The synergies of artists who, on the occasion of events and exhibitions create choral works and installations with the intention of encouraging the public to take a greater interest in the world of art.

9th, 10th, 11th and 12th October

10am/9pm

SMS Centro Espositivo
ground floor rooms
Bastione Sangallo

Exhibition

Organised by PAD

DriveWave

DriveWave is an intreractive installation developed as part of the CityDrive project, designed to be intuitive and accessible to all. To “feel” the advantages brought by the automated management of a crossroads compared with a traditional system of traffic lights and to demonstrate the respective performances “side by side” in a three dimensional model brought to life by the inclusion of vehicles projected by video. By means of a tactile interface, the user can vary the volume of traffic in the different directions and introduce “interfering” elements, such as pedestrians, and check in real time the impact on the system through multi-sensorial feedback.

9th, 10th and 11th October

10am/7pm

CNR, Foyer Auditorium

Installation

Organised by MIT Senseable City Lab

Bread and Bombs - 1940/1944

Archive film, video testimony, visual experimentation, historical documents, sound reconstructions, web platforms, citizen trails with a tablet, interactive maps, photographs of the time, private diaries and multi-media installations recount the story of that period of the 2nd World War in Pisa. An exhibition-workshop that involves the public with narratives, activities and laboratories. In one specific section photographs, documents and eye-witness accounts continue to be gathered by the citizens participating in the MemorySharing web project and in the exhibition. Memory understood as a fluid wave, as a network of relationships is an integral part of the daily life of each generation.
On 9 October MemorySharing inaugurates show 2.0 from the stage of the Geoid starting at 16:00 and at 18:30 continues to the SMS Exhibition Centre.

from 4 October to 16 November

10am/9pm

SMS, Centro Espositivo

Exhibition

Organised by Acquario della Memoria, with the Region of Tuscany, Municipality of Pisa and the University of Pisa.
Concept and preparation:
Lorenzo Garzella, Nicola Trabucco, Domenico Zazzara, Simone Sacco, Barbara Buldrassi

COOPERATION WANTED

VENUE:
–Scuola Superiore Sant'Anna

Innovation that can affect social needs and vulnerabilities by using the creativity of voluntary associations, social enterprises and organisations, finding new answers and activating changes in lifestyles to make it easier to face the challenges of contemporary society. Citizens become co-creators of relationships with a social impact. They are the centre of models of collaboration and active participation that are capable of improving individuals' sense of awareness of being part of a community. Values like solidarity, cooperation and responsibility become the drivers of new ideas which can meet social needs to make the actions of society itself more effective and more timely.

Hack your Aid

Take part in the Dataninja Hackathon on International Cooperation's data

Designers, journalists, developers and Open Data makers will have the chance to create mini open data and data journalism projects using datasets on the theme of development and the objectives for the new millennium. Among the Dataninja. it Hackathon's objectives: to involve non-profit organisation operators in the production, issue and reuse of Open Data and explore the data to tell stories on the topics of international funds for cooperation and the phenomenon of migration.

The 35th May and other imaginary inventions

Information and online participation in China through activism and control

Since the start, the government in China has promoted the Internet as an instrument of economic development, but also carefully controlled it as a dangerous means of criticising those in power. A tale of the paradox of the Chinese net through lexical inventions, tweets from activists and comment that is paid for.

The road to coltan: the other side of technology

Whether the smartphone in our pocket finances wars in Africa

All our mobile phones and lots of other electronic devices contain a small piece of the Democratic Republic of Congo: coltan, which comes from mines in the North-East of the country and trade in which also finances a war that has caused more than 5 million deaths since 1998. Is there any way we can change course? Yes, and it starts with consumer choice.

CULTURE IS SMARTER

VENUES:

_Scuola Normale Superiore
_Geoid
_Feltrinelli Bookshop
_Ubik Bookshop

Innovation allows traditional goods to be used in different ways and redraws the boundaries by giving more value to the collective interest and the interaction between all the players on the cultural scene: operators, creators and creatives, the public, and administrators. Normal tools, and reinvented ones (technologies, expressive styles, planning and construction methods, promotion and communication) capable of triggering a new "Renaissance" so as to go forward into the future in a shared, collective dimension.

Limitless memory

The past and the future meet online

A journey through literature, cinema, journalism and visual art to better understand how populations' historical and cultural heritage interacts with new media.

Sara Nocentini, Donatella Della Ratta, Marco Vichi, Breandán Knowlton, Paolo Costa, Lorenzo De Carli, Lorenzo Garzella, Pierluigi Vaccaneo and with the participation of Gabriele Salvatores (via skype).
Hosted by Riccardo Staglianò

9th October
4pm/6pm
Geoid
Panel

The ethics of social media

Nowadays we are all connected. Most of us use the Internet to share information, feelings and news. We can do this well or we can do this badly. Which doesn't mean that it's been done efficiently or skillfully, but rather that it is done in such a way that it does not have harmful effects for other humans and society. This discussion will debate how we can promote the positive use of social media with regards to social relations, entertainment and learning.

PLAY THE GAME

VENUE:
_MixArt

The economies of the Internet cross the world of video games – and gaming in general – not only as a market in constant growth but as a multidirectional network: from the collaborative ecosystems already widely in use because of free software that are even returning profits, to gaming approaches to problem solving in companies and government departments. New scenarios (or in some cases, renewed scenarios) in which gaming and its mechanics influence the way of doing business, social relations online and off, and daily life, while on the other hand networks pave the way for different scales of distribution, evolution and customisation of the gaming experience.

The 2014 Internet Festival's Gaming Area intends to run through many of these common threads to reveal their twists and turns and impressive pervasiveness in a very serious way: through gaming!

Renaissance Games Festival

A showcase of experimental and indie games

A festival within the festival rediscovering the social aspects of videogames through products created by Italian and international independent software houses. In common: a passion for experimentation and local multiplayer. So we can all play together... even the developers.

Gamification for Better Business

Businesses are increasingly adopting game design theory and techniques to improve their revenue, loyalty and engagement

With an annual turnover of over $80 billion and a source of inspiration for businesses and public institutes alike, videogames are the biggest sector in the entertainment industry. The concept of gamification was created in response to some worrying figures: just 13% of workers are “engaged” at work and more than 70% of new products and services don’t take off. Through the testimonials of Italian and global business leaders as well as those of game designers, we will find out how to come up with experiences and products capable of meeting business objectives.

DESIGN TO INNOVATE

VENUE:
_Bastione Sangallo

The exploration of the evolution of design through creativity and technology. A careful look at design-driven innovation, too; in other words innovations that do not arise from the requirements of the market but that in fact create new markets; that are not a part of new technologies, but give life to new meanings, anticipating future desires.

DESIGNforIF

The exhibition DESIGNforIF came into being from collaboration with the undergraduate degree course in design at the Università degli Studi, Florence.

Students were asked to take part in the Internet Festival gadget project and twenty of their projects were chosen to feature in the exhibition during the workshop run by Prof. ssa Laura Giraldi.

Using 3D printers and recycled materials the students created models and prototypes which are on display at Bastione Sangallo.

Of these twenty projects just one was chosen for production and is currently available for users of the Internet Festival.

Organised by Prof. Massimo Ruffili (acting Dean for the University Design Campus), the DesingforIF project aims to bring an explicitly new type of design to the communication sector of the Internet Festival: objects that are intentionally simple and traditional though modernised, functional and explicitly evocative of the Internet Festival, objects that are simultaneously able to combine the aesthetic and the immaterial with technical innovation, just like the web 2.0.

These models and prototypes are the result of the happy combination of creativity and technology. Many were self-produced at the local level, using a minimum amount of resources to promote sustainability. The gadgets are striking, high quality and innovative in terms of their immaterial and communication features, reflecting contemporary lifestyles.

Organised by Luigi Formicola. Scientific curator Laura Giraldi.
In collaboration with Design Campus and Università degli Studi, Florence

9th, 10th, 11th and 12th October
10am/9pm
Bastione Sangallo
Exhibition

Design Papers

Contemporary culture

Out of all the areas in the planning sector, design is certainly the most liberal, the most creative, the most representative of contemporary culture, the most dynamic and in step with the times. Design has developed new methods including Design Discourse, Design Driven, User-Centred Design, Design for All and Sustainable Design, perfecting tools and methods that are spreading to and being used by other areas in the planning sector.
The individual, their aspirations and their dreams are at the heart of design. Design is therefore understood to be a release from the project, from the value of the project, from the value of the plans, from the graphic mark stamped on objects surrounding us.
The installation Le Carte del Design (Design Papers) features 240 projects that were conducted for the dissertation part of the degree programmes Industrial Design and Design. Compressed onto large pieces of papers, the collection of these projects offers an evocative look at the relationship that exists between design, research and innovation.

Organised by Luigi Formicola. Executive project management Chiara V. Tataranni. A Design Campus production, Università degli Studi, Florence. Head of scientific content: Massimo Ruffilli, Elisabetta Cianfanelli. Scientific content curator: Gabriele Goretti

9th, 10th, 11th and 12th October
10am/9pm

UNIVERSITÀ DEGLI STUDI FIRENZE

Typing_DESIGN

Design, the discipline that comes up with ideas, develops, adjusts, balances and runs the production, communication and management processes, presents itself as a tool that extremely efficiently generates advanced products. This objective is much more easily met when design seeks to be innovative; it does not attempt to snub existing technologies but rather it seeks to advance them and perfect methods and products.
What is the connection between design, writing and technological innovation?
The exhibition Typing_DESIGN explores the relationships, the exchanges and chiefly the excellent results this unusual threesome produce.
On display at the evocative spaces of the Bastione Sangallo are iconic objects, landmarks in design.
A journey from Marcello Nizzoli's Lettera 22 to Ettore Sottsass's Valentine, from the commodore 64 to the first Appel iPhone via Hartmut Esslinger's Apple Mac computer and digital dictation software.

Organised by Luigi Formicola.
In collaboration with la Fondazione Anna Querci per il Design

TAKE THE MONEY

VENUES:
_SMS Biblio
_SMS Centro Espositivo

Innovation that is connected to the Internet offers new business models, generates opportunities, makes substantial modifications to marketing and communication, changes markets, and facilitates new relationships between entrepreneurs, investors, researchers and administrators. IF will host keynote speakers in order to understand which way the change is heading, innovative formats to allow ideas and business projects to grow more freely, exhibitions and themed installations. It will launch initiatives within the framework of "start-ups", the current "trend topic" half social problems and half company initiatives with a strong social and economic impact.

.itCup Registro

La startup competition - third edition

The third edition of .itCup, the start-up competition sponsored by Registro .it, the registry of .it domains managed by IIT and CNR. On stage 10 start-ups fight for investors' attention and the opportunity to fly to San Francisco with Mind The Bridge.

Organised by Registro.it

10th October
10.30am/1pm
SMS Biblio Basement
Event for the finalists of the start-up competition

A new way of doing business, a new concept of innovation

What happens when the owners of a business are also its workers? Or when a corporation adopts distributed and collaborative management models and forgets the management models inherited from the roman legions? Often prosperity. This is why we need "a new way of doing business".

Indy Johar, Izabella Kaminska, Stelio Verzera. Hosted by Simone Cicero

10th October
11am/12.30pm

GO GREEN

VENUE:
_Geoid

The Internet drives sustainability by developing "green alternatives" not just as business and production models but also by generating collaborative, trackable work models at a low cost. The food and agriculture aspect represents one of the new frontiers of innovation with the transformation of simple products into "connected products" thanks to storytelling and to technologies such as QR codes and augmented reality, laying down transparency and trackability as the foundation of the distribution of new lifestyles and of consumers who are more aware and better informed. The Internet is not a tool to advertise "green products" but an organisational environment in which "peer-to-peer", "open" and "crowd" concepts are not models for consumption, but models for disintermediation and participation. Go Green will take the form of both a #openfoodacademy, where the food will be the central element in rural social innovation, and a #r-expo to rethink the future of food and the challenges started by Expo2015.

Towards Rural Social Innovation

Is there an Italian road towards a green economy? Yes and it passes through social innovation in food farming. The future sustainability of our country relies upon decisions we make about farming and food.

Alex Giordano

10th October
10am/10.25am
Geoid
KNS

#hackingfoodsystem

Food as a common good

Seeing food as the key to human existence, rather than a commodity. Which innovative approaches allow us to reconsider food production systems? And what do we mean when we say food is the first step towards a sustainable future?

Cheryl A. Clements, The SoulFood. Hosted by Nick Difino

10th October
10.30am/11.40am
Geoid
Panel

#nextfood

Food, a meeting point between tradition and innovation

All the great traditions were great innovations. Can we innovate food farming without putting our health at further risk? How can new technologies help us?

Daniel Grover, Flavia Giordano and Lorenza Dadduzio from Cucina Mancina

10th October
11.50am/1.10pm
Geoid
Panel

#smartrurality

Food: innovation and social media

Connecting in-land and rural areas means that the infosphere will be flooded with real and different life choices: young people who decided to go back to their roots and work the land. With this in mind, digital storytelling makes in-land and rural areas a critical lens through which to reconsider modernity.

Kirsten Larsen. Introduction by Lorenzo Quarello

10th October
3pm/3.30pm
Geoid
KNS

#ruralsocinn

Food comes from the land, not just an oven

From food bloggers to food makers: homo sapiens is rediscovering homo faber. Putting the focus once again on the tangible and intangible value of food and the knowledge required to produce it.

Carmelo Troccoli, Donpasta Selecter, Communika Food.
Hosted by Giorgio Dracopulos

10th October
3.40pm/4.40pm
Geoid
Panel

#openfood

Food, transparency and Big Data

In the age of Big Data agro-food products contain millions of pieces of information that, if managed well, can improve both environmental conditions and the health of individuals. Who is in charge of this information? How is it controlled? A discussion about the need for transparent labelling and to regulate Big Data.

Tristan Copley Smith, Pietro Giordano. Hosted by Adam Ardvisson

10th October
5pm/6pm
Geoid
Panel

Working tables

Working tables for #openfoodacademy: 5 themed workshops to collaboratively discuss at record speed the 30 items on the agenda. Take the debate to the infosphere and rethink the future of food and the challenges set by Expo2015.

In collaboration with (and hosted at) the restaurants "La Pergoletta", "Il fantasma dell'opera", "Osteria Bernardo", "Ir' tegame"

11th October
9.30am/1pm
Workshop - limited places available

FoodStartup

Towards a Mediterranean model of accelerating business

In this age of tech-based innovation, the current start-up model does not reflect the reality of Italian production which consists of artisans, makers and small businesses located throughout the land. How can we make this reality a thriving ecosystem? What if we needed to slow down business rather than accelerate it?

Raffaele Mauro, Damiano Petruzzella, Agostino Riitano. Hosted by Barbara Carfagna

11th October
3pm/4.15pm
Geoid
Panel

#Re-expo

Reconsidering the challenges set by Expo 2015

A presentation of the Policy Paper produced by the 5 working groups of #openfoodacademy. Fifty young innovators will present the results of the morning's working groups. These topics will then act as starting points for an open debate about the future of food, the value of the agro-food sector and the innovations that can improve the production and consumption of food.

Adam Ardvisson, Maria Letizia Gardoni. Hosted by Barbara Carfagna

MAKE IT GOOD(S)

VENUES:
_SMS Biblio
_SMS Centro Espositivo

ICT becomes a "raw material" in the creation of products designed to satisfy micro- and macro-markets. "The bit becomes the new atom" (quotation from Chris Andersson) to generate products and instruments that no longer belong to the immaterial world of knowledge and digital skills, but are tangible objects: drones, design and consumer objects, décor, buildings, games and clothing. Fablabs (Fabrication labs) are workshops in which prototypes can be constructed, makers are inventors/manufacturers that use talent and technologies to give new life to the figure of the craftsman; the Internet is the environment where inventions, prototypes and alterations can be shared and developed. The Internet Festival will provide an opportunity for the products to be examined in close-up.

MAKERS' WORKSHOP - Experiments of the future

Together we will explore the border land between the internet and the physical world where bits and atoms interact. We will focus on the increasingly close ties between the digital and the manufactured and investigate IT platforms for creating, communicating and design. Our temporary workshops come equipped with laser cutters, CNC mills and other tools as well as hands-on guests willing to share their knowledge of this border land.

Hyper-personalisation

Platform products designed using sets of connections between parts rather than dimensions

Together we will learn about the programmer MatterMachine, an online parametric design programme, to create a product similar to Opendesk's Lean Café table. Our product will be prototyped with a laser cutter before being made by the milling machine belonging to the temporary workshop.

Organised by MatterMachine

9th and 10th October
10am/6pm
SMS, Centro Espositivo Ground floor, Makers' Workshop
Limited spaces are available for this workshop: please book your place.

Listen to involve

Involve rather than sell. The paradigm between content users and objects has changed

The heads of MOD-O will join us on a three-leg journey of listening, feeling and involving. Each leg is an immersive simulation of how a true 3.0 business operates: an experimentation of roles and techniques. The demonstration will be documented with the very tools we will be learning about.

Organised by MOD-O + ISOLA

9th, 10th and 11th October
Thu. Fri. 3pm/6pm Sat. 10am/1pm
SMS Biblio Open CoWo space, second floor
Limited spaces are available for this workshop: please book your place.

The situated aesthetics of human - machine symbiosis

In this talk i will present our ongoing series of experiments at the edge of science, art and technology that is probing the natural principles of creativity and aesthetics and their synthesis in artefacts. At the core of these experiments stands the hypothesis of situated aesthetics: beauty emerging from the interaction between meaning generating agents. I will illustrate this idea using performances and installations produced at SPECS over the last 15 years ranging from interactive music systems, sentient spaces and hybrid performances and place it in the context of my theory of mind and brain called Distributed Adaptive Control.

R.I.O.T. Hackathon "Revolutionizing the Internet of Things"

The Internet of Things means that our future world will offer boundless opportunities! The worlds of mobility, entertainment, domotics, gaming, fitness and any other industry will drastically change. This development marathon brings together talented coders, hackers, enthusiasts, makers, students and researchers who are ready to work on one of the most important topics of the future, that is, how to make everyday objects alive. This reality is not far off and we've got to be ready for it.

In collaboration with FabLab Pisa and CNA Digitale. Organised in conjunction with the "Saperi and Innovazione-Invest in Tuscany" project

Regione Toscana | POR CReO 2007-13 | invest in tuscany | Repubblica Italiana | Unione Europea FESR

Self-production/promotion

Web-based tools enable small digital self-producers to reach global markets

You will start by registering on the Co-hive platform as a crafter, maker or artisan. The staff from the blogzine Pirati&Sirene will then give you a creative topic; drawing inspiration from the topic and using the tools available in the workshop, you will then make small objects using the Lofoio makerspace. You will then learn how to promote your object online.

Organised by Pirati&Sirene, Co-HIVE, LOFOIO

Startup of things

Makers and fabbers are innovating with a hitherto unseen intensity and inventiveness, but what type of business would provide the perfect backdrop to the development of their projects?

What will Italian businesses be like in ten years? With which start-up model do we, as a country, have a competitive advantage? Should we go back to basics with digital manufacturing or can it be introduced into our local areas? The very transformation that start-ups are bringing to services can now also be introduced to physical products: the time is ripe for the start-up of things.

#Opencowo

What are artisans doing with coworking?
Effectuating change!

Collaborating, contaminating, new jobs and new ways of working have always been the focus of CNA NeXT (www.cnanext.it), an initiative aiming to innovate CNA Young Entrepreneurs. We're all artisans! Jobs that involve using your hands and intellect are much more than simple manufacturing. Products can be improved by knowledge, communication services, innovation and creativity and the result is a highly promotable, intelligent, creative and hand-made Made in Italy good. For three days CNA NeXT has come together with three of the biggest coworking networks in Tuscany to manage a coworking space devoted to Italian creativity. "Opencowo" is a free and open space available for anyone to network, work, have meetings and get to know the philosophy behind and the workers of one of the biggest coworking entities in the region. You will be welcomed by the promoters who have organised some activities.

BREAK THE RULES

VENUES:
_CNR
_Scuola Normale Superiore

The dark side of the web hosts the technological challenge of hackers who, as "dominators" of technology, break the chains of recognisability and trackability to gain access and reveal the limits and controls of and on the Net. Darkness is the natural home of porn, which has made the Internet a channel for rapid distribution and "experimentation" of methods and approaches that have become "case histories". The dark extremities test Cybersecurity in terms of protecting sensitive data, caring for fragile elements and an informed use of the web.

The growth of cyber threats

Data from 2011-2014, the situation and trends

The rapid growth of the internet and the continual development of interrelated digital platforms come with considerable and undeniable advantages and are currently the driving force behind the most advanced economies in the world. Nevertheless, a series of security problems are emerging. We've got the data and will analyse the growth of these threats and their implications on the future of the net.

Andrea Zapparoli Manzoni

When fridges start sending Phishing emails it's perhaps time to re-evaluate our security strategy

Marketing is great at describing future situations involving the Internet of Things, Augmented Reality, Always Connected and other similar concepts. The growth of technology brings with it countless benefits to our lives and work. But too many risks are still being ignored. Together we are asking whether our business networks are capable of dealing with unusual risks, including those from fax machines, liquidisers and users.

Alessio Pennasilico

Electronic porn culture. Flesh online

Long live the new flesh (David Cronenberg)

Having sprinkled theatre, photography, comics, cinema, television and other classic forms of culture with a touch of fleshy euphoria, the realm of porn has now become intertwined with pop culture; so much so that porn has become its pillar, standing out lubricated and plastic in the landscape of the web. Electronic shop windows, live cams, gay for pay, fucking machine, online dating, love dolls: dissolute and sumptuous, porn culture is overrunning the webs of cyberspace and daily life, heating up connections and saturating contemporary social life with desire.

Augmented reality

Logge di Banchi

In the heart of Pisa the "open" space of the Logge is hosting innovative initiatives connected to OpenToscana, a collaborative platform formed by the Assessorato ai Sistemi Informativi and with participation from Regione Toscana, and to COOLT, a week of culture promoted by Regione Toscana's homonymous Assessorato.

Tutorials, videos, stalls, meetings, tasters of 3D in homage to innovation and start-ups: at the Logge OpenToscana is experimenting with access to online services, making open datasets available and encouraging citizens to participate in regional decision-making processes. IF2014 and OpenToscana are also giving Tuscany-based online publications the opportunity to get their name out there.

Memory 2.0 of the 70th anniversary of Italian Liberation is the main theme of COOLT at the Logge: a 20th century Tuscan portal, videos, trips into the archives in search of our memories of historically important moments, images, the web Radio Cora, the animation of "Memory sharing" and an edition from teenage-run Radio Immaginaria will create a lively and engaging space.

Journalists from ANSO (National Association for the Online Press) are also helping out by putting together a programme that will delve deep into all the topics discussed under the Logge.

Invest in intelligence

Ponte di Mezzo is the venue for "Why invest in Pisa?", an offshoot of the "Knowledge and Innovation – Invest in Tuscany" project. This information and communication point is run by the Comune di Pisa to promote the city as a fertile breeding ground for the development of businesses working in the ICT sector. Videos, information and interactive tests will breathe life into this area which is vitally important for the future of the city.

Regione Toscana | invest in tuscany | REPUBBLICA ITALIANA | UNIONE EUROPEA FESR

Debates about and our faith in social media

Technology, cognition and innovation

How does social media impact the way communities live together and participate in politics? An excellent opportunity for democracy or a fertile breeding ground for the worst types of communication? Fourteen experts will debate these topics to help us understand and govern the way in which the internet is changing social interactions. The detailed schedule of events is available on www.internetfestival.it.

9th October
10am/6pm
CNR
Conference

Conference

Big Data & Travel in the future

Following the "digital crumbs" each and every one of us leaves behind when we use digital devices, science can now measure our desires, life styles, social relationships and movements in society. This new social microscope provides us with the data to help us understand how the complex organism that is human society operates. This workshop will discuss the challenges and opportunities we will face in the near future, starting with the results of a CNR and University of Pisa European research project that predicts the arrival of the electric car and its impact. With international experts we will debate the challenges facing future means of transport. To conclude the event, we will present the results from the TagMyDay project (http://tagmyday.isti.cnr.it).

Michael Batty, Laszlo Barabasi, Carlo Mol, Davy Janssens.
Fosca Giannotti will open proceedings

11th October
10am/6.30pm
Polo Fibonacci, Edificio E Magna Room
Conference

An interview with Enrico Rossi

Lucia Annunziata will interview Enrico Rossi. The conversation will take place almost five years since he was elected as Governor and just five months from the next regional election: analysis and prospects at a crucial moment for the future of the country, particularly with regards to investment and innovation.

11th October
12am/1pm
Geoid
Interview

But how complex is it?

From the Turing machine to physical models, a look at complex systems

The characteristic feature of modern systems, physical models and IT scenarios alike, is their "complexity". Just like in the Network of Networks, millions of devices interact and require new analysis techniques which themselves represent the boundaries of recent research. A discussion with experts carrying out research in the area.

Nicoletta De Francesco, Luigia Carlucci Aiello, Francesco Sylos Labini.
Hosted by Marco Malvaldi

T-TOUR

T-Tour Edu & 4 All_Stazione Leopolda

Transformed into an extremely active breeding ground for learning, **Stazione Leopolda** is the T-Tours headquarters. Aimed at both schools and the general public, games and educational labs, workshops and tutorials as well as shows and interactive conferences are on offer. A range of activities, suitable for all ages, discuss the many faces of the Net and technology, from computer science to visual art, robotics to literature, music to science.

NEW

A BREATH OF FRESH AIR
Tutorials of times past

A small section of the Festival consisting of courses and activities concerning old professions that were conducted strictly without the Internet, smartphones or other gadgets from the modern era.

Thursday, Friday e Saturday: 9am /1pm - 3pm/7pm
Sunday: 3pm/7pm

T-Tour 4 Expert_Polo Fibonacci-UniPi and CNR

The 4 Expert 2014 calendar is full of activities targeted at university students and workers.

Building E of the **Polo Fibonacci** will hold meetings about the sectors of ICT and Public Administration as well as about the world of small and medium-sized businesses. Are you an aspiring or experienced programmer? Come along on Friday to attend the talent competition held for aspiring or experienced programmers. Not to be missed!

The research area of the **CNR** is opening its doors to the T-Tours, hosting activities about online privacy and security, social media, smart cities and teaching methods. Every afternoon and all day Saturday a number of meetings aimed at teachers and trainers will be held.

POLO FIBONACCI - Thursday, Friday e Saturday: 9am /1pm - 3pm/7pm
CNR - Thursday, Friday e Saturday: 10am /1pm - 3pm/7pm

Special activities or activities held in other venues

Some T-Tour activities are held in different venues and at different times to those listed. Find out more information in the programme or on the website.

HOW TO TAKE PART

All T-Tour events are completely free and are available until all places have been filled. Booking is therefore recommended for individuals and obligatory for schools and large groups.

To book your place please access www.internetfestival.it and follow the links provided on each event page.

When you arrive please state the name your booking was made under. You do not need to bring your paper ticket with you.

A special line has been created to **assist schools**.
Please call 338-9326561.

T79 _ Virtual environments and robotics: exploring the limits of perception

A visit to the Laboratory of Perceptive Robotics

The Lab of Perceptive Robotics is opening its doors to the public. Travel to the limits of digital perception via simulated environments, robotic interaction, motor illusions and power amplification.

Marcello Carrozzino and Chiara Evangelista, Laboratorio PERCRO from the Istituto Tecip della Scuola Superiore Sant'Anna, Pisa

10th October
10am; 11.30am
Laboratorio Percro
Via Alamanni 13/b
San Giuliano Terme (PI)
Visit to the laboratory

T80 _ Bit Party - Finger food

A taster of the party in the town centre

Virtual bike, Galilean experiments on a unicycle and a breath of fresh air. Sunday morning, whilst waiting for the big festival in the afternoon at the Stazione Leopolda; you can look for T-Tour trails scattered around the city centre. Further information on www.internetfestival.it!

T82 _VIS: Virtual Immersions in Science in the CAVE3D

Observe and manipulate in 3D the most recent scientific discoveries made at the Scuola Normale Superiore

The visit to the CAVE3D, part of the VIS outreach programme run by the SNS, lets you interactively and three-dimensionally immerse yourself inside primordial black holes, complex molecules, neural networks, archaeological reconstructions and particle beams.

Marcos Valdes, Scuola Normale Superiore

9th, 10th and 11th October
Fri. Sat. 11am
Thu. Fri. Sat. 4pm
Scuola Normale Superiore
Visit to the laboratory
